OCR REVIEW

18. F a A graphic design ca from 50GB to 200GB. Employees projects. Each project produces files ranging kstations depending on need to access and edit these files from different worl availability. The company wants to implement a distributed) i availability. company should prioritize. Justify why each feature is important for this specific scenario. A scientific research center needs to run complex climate simulation models that require massive computational power to process weather data and predict hurricane paths. Would you recommend distributed processing or parallel processing? Justify your answer with THREE reasons.
